

Entity - Relationship Diagram - DBMS - Workshop

38/07/2023

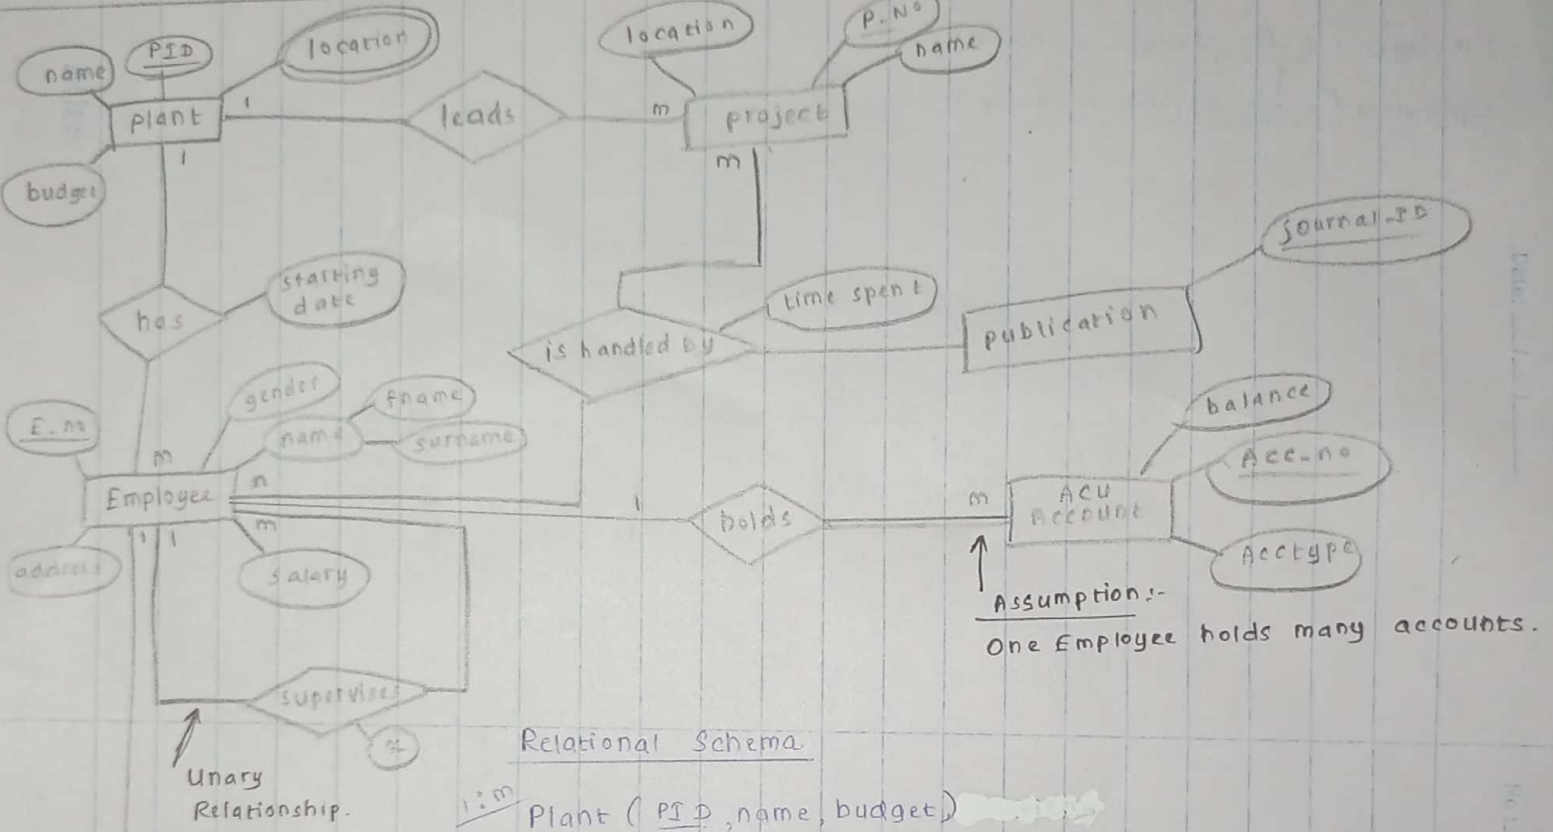

chem's
1:1
1:m
m:n

In a weak entity, there can't be an primary key. Instead of primary key, it is called as "partial key".

Vnary 1:1 / 1:M
Unary M:N

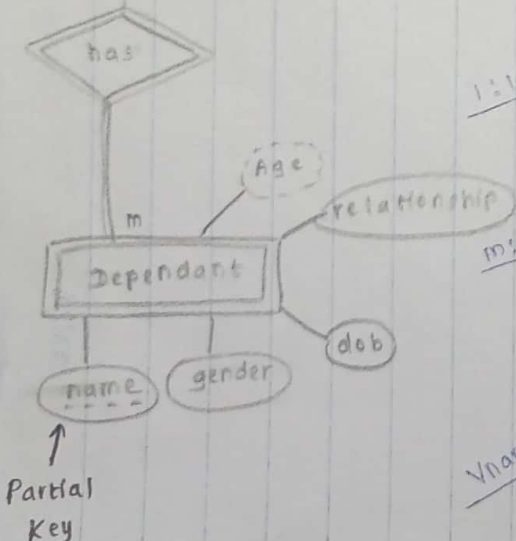

Relational Schema

1:m Plant (PID, name, budget)
Project (P_No, name, location, PID)
Plant-location (PID, location) ← multivalued attribute
1:1 Employee (E_No, salary, gender, address, fname, surname)
Account (Acc_No, Acctype, balance, E_No)

m:n Employee (E_No, salary, gender, address, fname, surname)
Project (P_No, name, location)
Employee - Project (E_No, P_No, time spent) ← many to many relationships

Vnary
Student (a, b)
Diagram (a, d, a)

Upon completing each project, employees themselves may publish it. Each publication is uniquely tracked by its journal ID.

Employee (E-No, Name)

~~Project~~

Project (project-no, name, location)

Publication (Journal-ID)

handed by (E-No, Project-No, ~~time spent~~ Journal-ID, time spent)

Employee (E-No, fname, surname)

Supervisor (E-No, Supervisor-ID, x)
